# Stop ransomware and phishing now

Small and medium businesses are prime targets for cyberattacks. Ransomware and phishing can cripple operations, drain finances, and damage trust. Here's how to fight back with a layered defense.

## 1 Why these threats matter

- Ransomware locks your data and demands payment.
- Phishing tricks employees into giving away credentials.
- Both can lead to downtime, financial loss, and compliance nightmares.

## 2 Start with device protection

- Deploy **OpenText™ Endpoint Protection** to block malware before it runs.
- Add **OpenText™ Managed Extended Detection and Response** to prevent alert fatigue. Let our team manage an act of alerts for you.

## 3 Secure your email channel

- Use **OpenText™ Core Email Threat Protection** to stop phishing links and malicious attachments.
- Encrypt sensitive emails automatically with **OpenText™ Core Email Encryption**.
- Keep email running during outages with **OpenText™ Core Email Continuity**.

## 4 Block bad traffic early

- **OpenText™ Core DNS Protection** prevents devices from connecting to malicious domains.
- Stops ransomware command-and-control before it starts.

## 5 Train your team

- **OpenText™ Core Security Awareness Training** teaches employees to spot phishing and avoid risky clicks.
- Continuous simulations build real cyber resilience.
